

Réseau de recherche sur les données de santé du Canada  
**Health Data Research Network Canada**

**Data Access Support Hub (DASH)**  
Webinar

January 28, 2021

Presenters:

Juliana Wu, Site Lead, DASH

Marie-Chantal Ethier, Lead, DASH

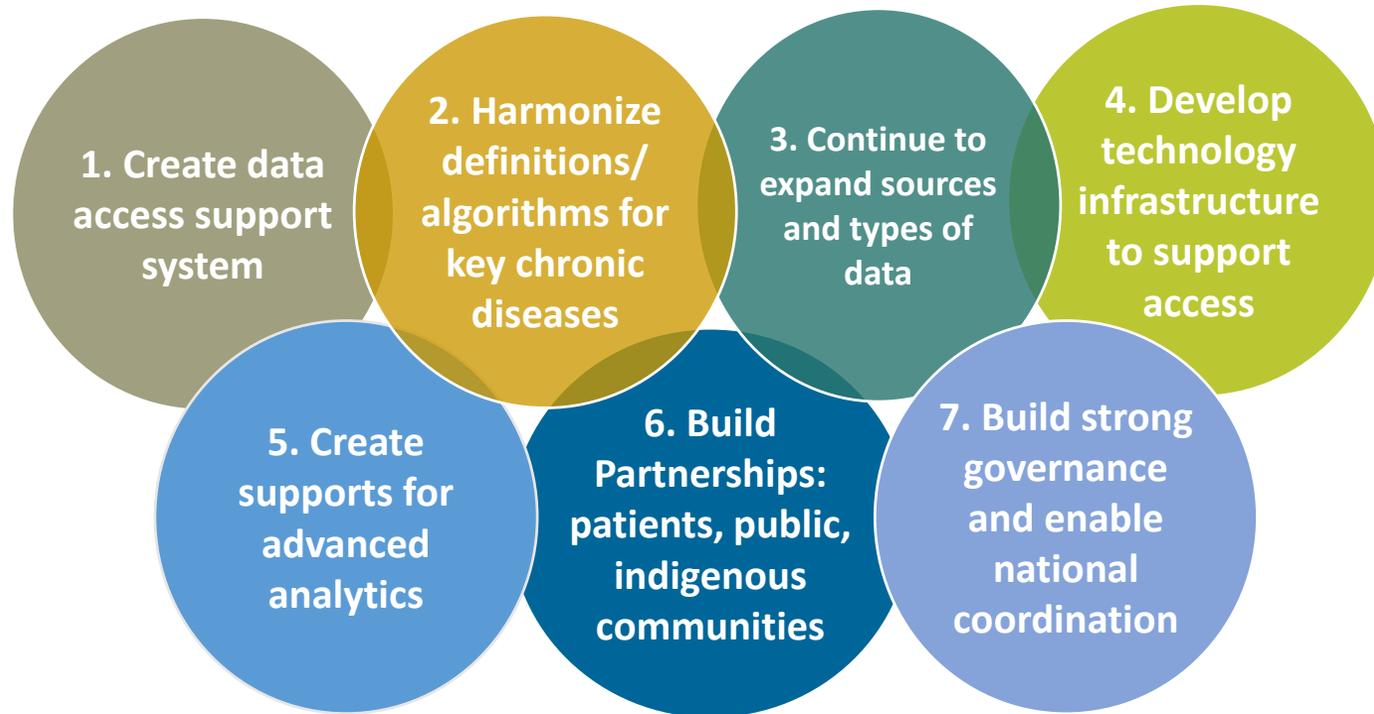

# Agenda

- Overview of HDRN Canada
- Overview of DASH
- DASH Accomplishments and Activities
- Upcoming DASH Activities and Opportunities
- Questions

# Health Data Research Network (HDRN) Canada

## Objectives:

## HDRN Canada Principles:

- ✓ Distributed network with distributed funding
- ✓ Respect for local context, policy environment, and existing jurisdictional responsibilities for delivery of health and social care
- ✓ Leverage and share existing assets (infrastructure, data, human and technical capacity)
- ✓ Openness to ideas, input, and new collaborations

# HDRN Canada Organizations

HDRN Canada is comprised of provincial, territorial, and pan-Canadian organizations with decades of experience managing health data

Each HDRN Canada Organization brings its established relationships, including with their ministries of health and local data providers.

# Data Access Support Hub (DASH)

1. Create  
data access  
support  
system

DASH is a single access portal providing coordinated, “conciierge” service for researchers

- Services provided by multi-centre coordination team
- Facilitates access to data in provincial/territorial and pan-Canadian data centres in a distributed manner; connect and support meeting jurisdictional requirements
- Excludes: multi-jurisdictional requests that can be met solely by pan-Canadian data assets held at CIHI or STATCAN

## DASH Objectives

- Make local processes **transparent** and comprehensible to requestor
- Provide **coordinated support** to requestor throughout request process as much as possible
- **Harmonize** aspects of data access processes across data centres over time
- **Streamline** and progressively **automate** the DASH central request process

# DASH Website

## Resources available through DASH:

- 380+ datasets available for request
- 140+ multi-jurisdiction algorithms from 34 existing validation or feasibility studies
- Inventory of data access requirements and procedures at HDRN Canada partner centres
- Online request intake form
- COVID-19 Resources

The screenshot displays the DASH website interface. At the top, there is a navigation bar with links for 'ABOUT', 'NEWS', 'FOR THE PUBLIC', 'SPOR CANADIAN DATA PLATFORM', 'DATA ACCESS SUPPORT HUB', and 'COVID-19'. Below this is a breadcrumb trail: 'HOME > DATA ACCESS SUPPORT HUB (DASH)'. The main heading is 'Data Access Support Hub (DASH)'. On the left, a sidebar menu lists various sections: Home, About (Board of Directors, Executive, Member Organizations), For the Public, SPOR Canadian Data Platform (SPOR CDP Advisory Committee), Data Access Support Hub (DASH) (How DASH Works, Data Assets Inventory, Algorithm Inventory, Data Access Processes, Working with Indigenous Data, Frequently Asked Questions, Log In), COVID-19 (COVID-19 Data Holdings, Links and Resources). The main content area features a photograph of healthcare professionals, followed by a description of DASH as a one-stop data access service portal. It includes 'SIGN UP' and 'LOG IN' buttons. Below this, it states 'DASH aims to:' followed by a list of goals: providing transparent information, coordinated support, feedback collection, and automation. A paragraph describes the multi-centre coordination team. Another paragraph notes that DASH supports and respects OCAP®. A second navigation bar is visible below, with 'COVID-19' selected. This section includes a 'HOME > COVID-19' breadcrumb, a 'COVID-19' heading, and a sidebar menu. The main content area under 'COVID-19' contains text about HDRN Canada's role, a 'Latest Updates as of December 1, 2020' section with a list of news items, a 'Collaborations' section with a list of partnerships, and a 'News and Updates' section.

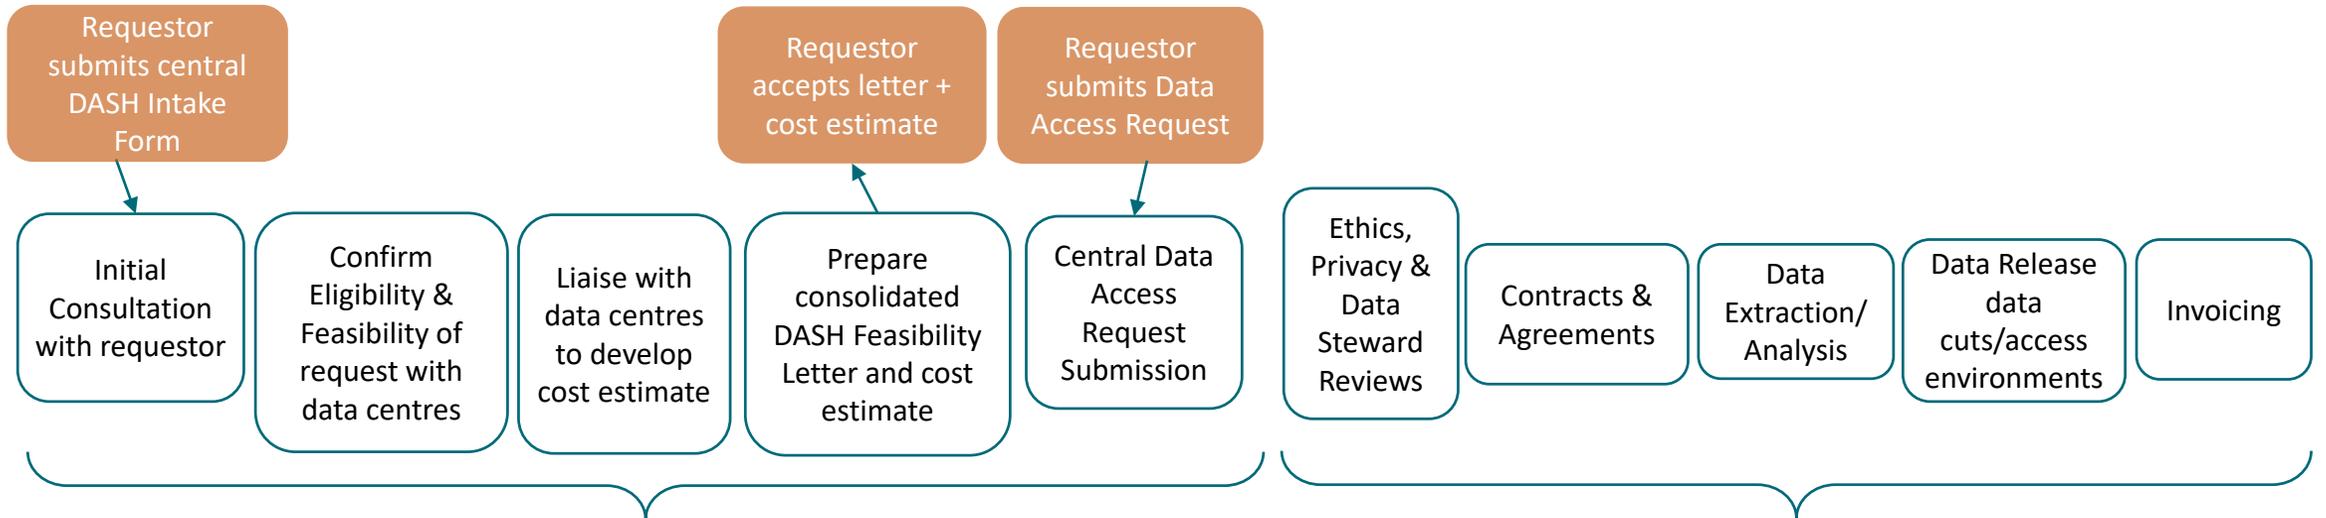

# Data Assets Available via DASH

- Traditional sources of **administrative** data (e.g. physician payment information, hospital separations), drug claims, patient assessments in long-term care and home care
- Other clinical data, including data from electronic medical records (EMRs)
- **Data Asset Inventory** provides overview of information of data holdings that can be requested through DASH: <https://www.hdrn.ca/en/inventory/>
- Overtime, will integrate **new data sources** including expanded EMR/clinical data, data collected directly from patients, and social data when available

# Data Access via DASH

- Data access is in accordance to each partner organization's access policies and procedures
  - Legislative or policy limitations in many Canadian jurisdictions related to:
    - Disclosure of patient-level data
    - Transfer and/or sharing of data across jurisdictional boundaries for research use
- Impacts ability to pool data in one location for analysis
- Researchers are encouraged to connect with DASH early in the research design phase, on topics that can impact data access such as linkage, disclosures, hosting and access to linked data, informed consent and data sharing agreements

# DASH Service Model

## Efficiency gains through DASH:

- ✓ Central intake process
- ✓ Coordinated eligibility and feasibility assessments
- ✓ Meeting coordination with data centres and requestor, and prepare consolidated feedback and cost estimates
- ✓ DASH staff support requestor in populating data request forms

## In the short term:

- DASH staff supporting requestor through these highly localized steps
- Timelines will remain quite variable based on complexity of data request, various review times and researcher response time

# DASH Accomplishments and Activities Completed To-Date

## Coordinated Support

- **DASH Launch** in Feb 2020 and began central intake
- Receipt of 37 **DASH requests** since launch

## Process Transparency

- Developed **Data Access Process Inventory**
- Summarized **Indigenous Data Access Processes**
- Developed **Research Study Design** considerations for researchers

## Process Harmonization

- Developed **Access Workflow Model**
- Developed **Linkage Models**
- Developed draft **DASH Data Access Request (DAR) Form**
- Identified criteria for looking at **Private Sector Requests**

# Indigenous Data Access

**Goal:** to understand and make transparent Indigenous data access policies and processes at HDRN Canada partner organizations

- ✓ Consulted with partner organizations and summarized processes
- ✓ Adapted our workflow model to reflect variation in local processes
- ✓ Make processes transparent to researchers and community on DASH website (target: March 2021)

## Key observations

*"Nothing About Us Without Us"*

- ✓ Early engagement of Indigenous communities in the research project is necessary
- ✓ Approval of research project by Indigenous groups is required in most jurisdictions
- ✓ Local variation in processes exists to ensure OCAP® principles and others are respected and reflect diversity across Indigenous groups

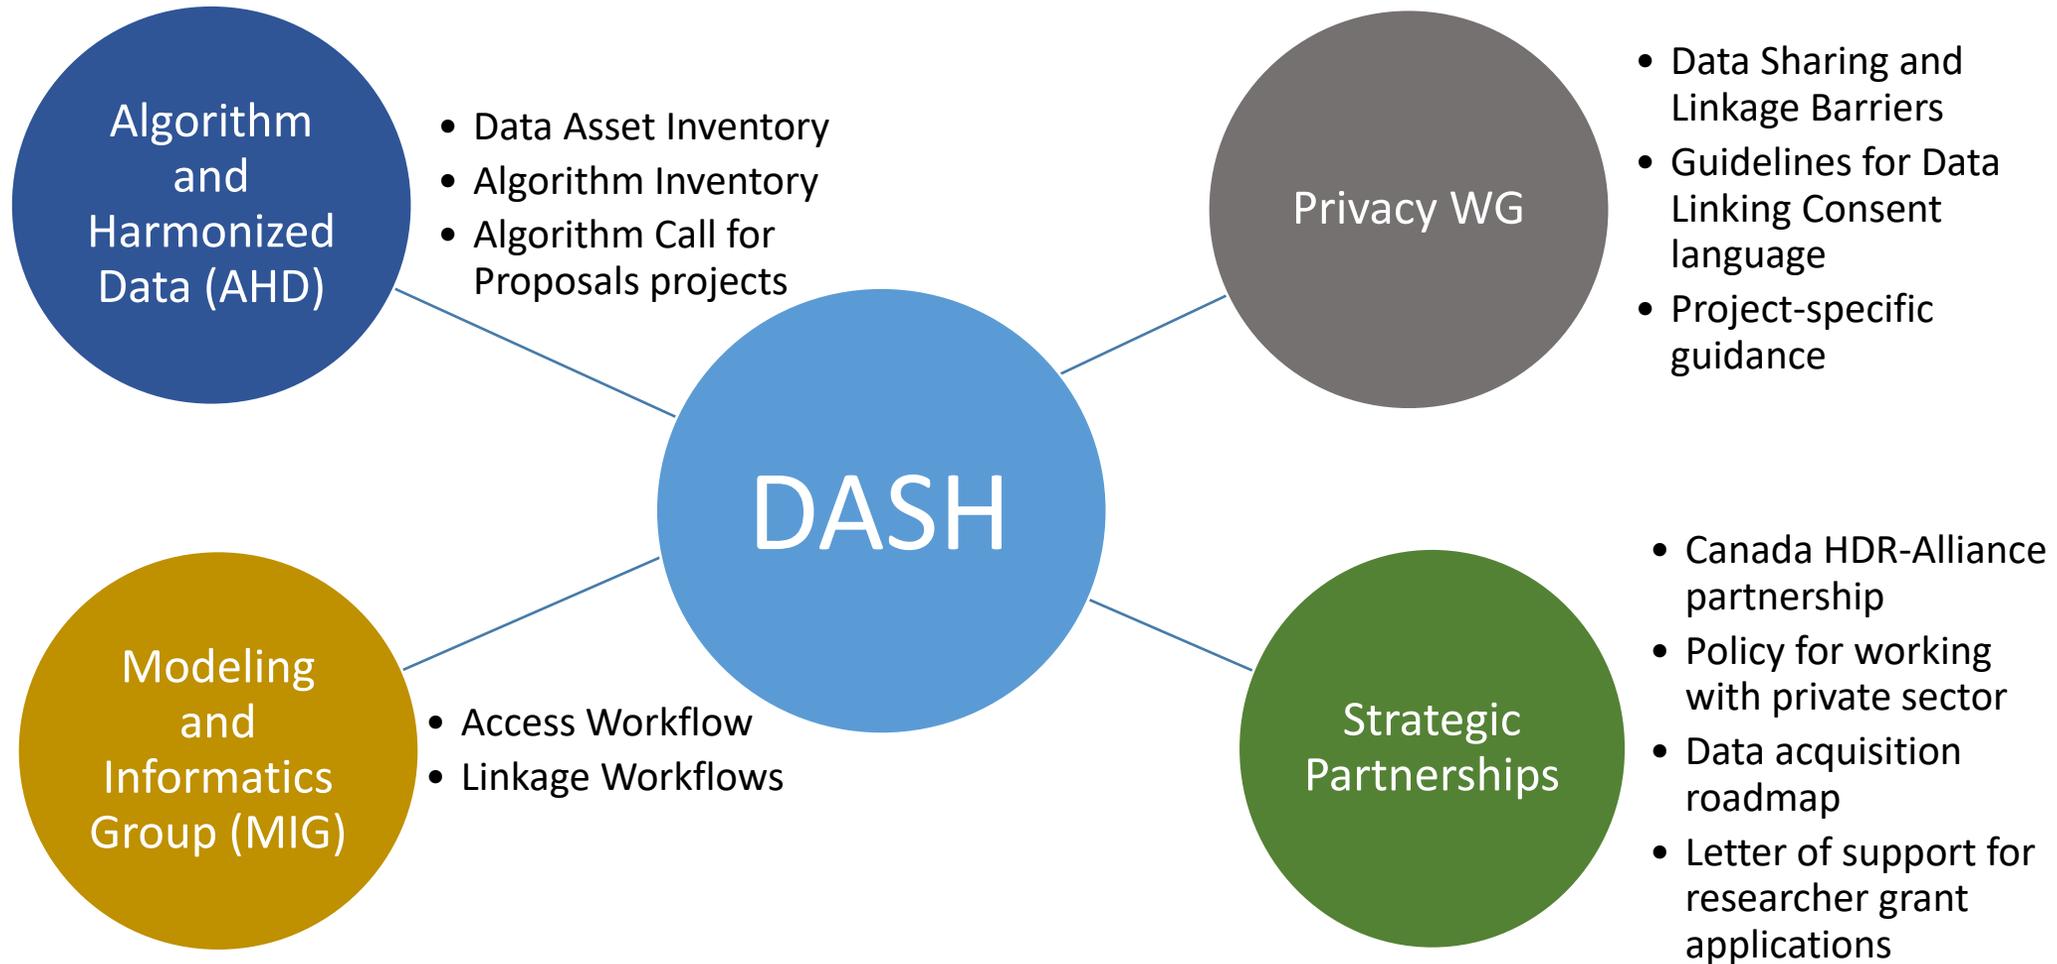

# Strategic Partnerships

- The [Canada HDR-Alliance](#) facilitates HDRN Canada to work with external data partners to expand sources and types of data available to researchers in a coordinated way
- The Canadian Partnership for Tomorrow's Health (CanPath) is the first member of the Canada HDR-Alliance

DASH role in supporting the Alliance:

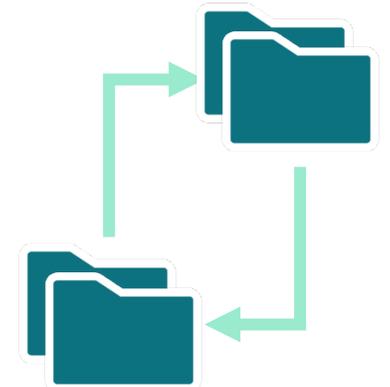

- ✓ Establish joint data access workflow and review processes
- ✓ Support multi-jurisdictional research projects
- ✓ Support future work with other pan-Canadian cohorts and networks where linkages not currently existing

# DASH Collaborations within HDRN Canada

# Overcoming Data Sharing Issues in Canada

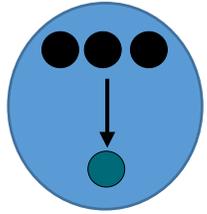

- Often researchers would like data from multiple jurisdictions to be pooled in one location – but this is not always feasible
- Legislative review underway to understand what is possible in current state
- Statistical review underway to determine what analyses are feasible in a distributed data environment
- Secure environment review underway to assess best practices and potential for environments to be connected for distributed analysis

# Upcoming DASH Activities

- Implement DASH Data Request Form
- Publish Indigenous Data Access Processes on DASH webpage
- Support projects as part of Algorithm Call for Proposals
- Integrate project tracking mechanism into DASH researcher portal
- Support policy development for private sector research/access requests

# Opportunities

- Identify additional focus areas of harmonization within data access process (e.g. dataset creation plan, data de-identification, training/orientation, etc.)

- Tackle barriers for data sharing and linkage across jurisdiction

- Continue to build relationships within HDRN Canada as well as with external partners and researchers to support our objectives and enhance our services

# Questions and How to Reach Us

For more information about **DASH**

Contact: [dash@hdrn.ca](mailto:dash@hdrn.ca)
